INDEX CHEMICUS®

Current Abstracts of Chemistry is published weekly to provide chemists with a current guide to chemical research and chemical technology. It contains abstracts of articles reporting the synthesis, isolation, and identification of new compounds, and of articles reporting new chemical reactions or syntheses. Graphic and narrative abstracts are prepared from the original article or selected from the source journal. Flow-diagrams are used extensively to facilitate rapid scanning and discovery of material relevant to the user's research. *Use-profile* and *technique* data symbols alert the user to potential and proven activities of the compounds and to analytic procedures used by the investigator.

Index Chemicus® is the index section of **Current Abstracts of Chemistry**. IC® is published monthly and cumulated semiannually and annually. IC contains journal, author, molecular formula, and subject indexes. The semiannual and annual volumes contain in addition a Rotaform Index® of molecular formulas.

SUBSCRIPTION RATES

There are two rate schedules for **Current Abstracts of Chemistry and Index Chemicus™**: educational and industrial. The educational rate applies to universities, colleges, medical schools and hospitals. The industrial rate applies to all other organizations.

Educational rate . . . . . $750 Industrial rate $1100

Each base (first) subscription entitles the subscriber to receive two copies of the CAC section, and one copy of the IC section. In cases of multiple subscriptions, both the educational and industrial rates drop to $200 per unit (CAC or IC section) for additional subscriptions up to ten, and $100 per unit for subscriptions beyond ten.

For further information: **In the United States** contact Mr. Charles E. Granito, 325 Chestnut Street, Philadelphia, Pa. 19106. Telephone (215)-923-3300. Cable SCINFO. **In Europe** contact Mr. Anthony Cawkell, 132 High Street, Uxbridge, Middlesex, Telephone Uxbridge 30085 or Mr. Peter Aborn, 49 Avenue Paul Doumer, Paris 16ème. Telephone 870 80 58. **In Japan** contact Mr. Takashi Yamakawa, Tsutsumi Building, 13-12 1-chome, Shimbashi, Minato-Ku, Tokyo. Telephone 502-6471.

Second-class postage paid at Philadelphia, Pa.

ANNUAL CUMULATIVE INDEX—1971

VOLUMES 40 TO 43

ISSUES 371 TO 422

ABSTRACTS 171,533 TO 185,339

INTRODUCTION

This Annual Cumulative Index covers Volumes 40 to 43 inclusive, issues 371 through 422, of *CURRENT ABSTRACTS OF CHEMISTRY AND INDEX CHEMICUS* ™ These issues contained abstracts of 13,807 articles. The cumulated Molecular Formula Index contains 151,657 entries, the Author Index 38,006 entries, and the Subject Index 37,618 entries.

The Annual Cumulative Index replaces the monthly and semiannual interim indexes to Volumes 40,41,42 and 43 which should now be discarded. Detailed binding instructions are given on page 379 of this issue. Additional specific details about each index are provided separately in the introductions to the Subject, Molecular Formula, Author and Journal Indexes.

Each year a detailed statistical analysis of the *CURRENT ABSTRACTS OF CHEMISTRY AND INDEX CHEMICUS** from its inception is provided. Table I is an analysis by year of the literature—not the year of CAC&IC™ Data on the 1971 literature is not completely available until the middle of 1972 due to publication lags of certain journals.

Table II is an analysis based on the year of CAC&IC*

Table III shows that the increasing use of English as the international language of science and chemistry is indicated by a further increase to 63.5% in the 1970 literature. In 1960 the corresponding figure was 49.9%. This is all the more remarkable considering that the literature produced each year has almost tripled.

In contrast the percentage of Japanese and German literature has declined almost 50%. Whereas German was almost 17% in 1960, it was 11% in 1970. While the Japanese literature was 7% in 1960, it was 2% in 1970. The latter figure does not reflect the continued large contribution of Japan to the literature which is published in English.

TABLE I

MOLECULAR FORMULA INDEX

ABSTRACTS 171,533 TO 185,339

The Molecular Formula Index contains 151,657 entries. Each column is consecutively numbered. For greater clarity and convenience, the molecular formulas appear at the left hand side of the columns, followed by one or more periods, followed by the compound's address which consists of the abstract number and the compound number. Furthermore, the C-H headings have been indented. When a C-H grouping is continued in the next column, its heading is repeated at the top of that column (see e.g., top line in column 35).

A hyphen (-) separates a compound number from its abstract number. Diagonal lines (/) are used to separate compound numbers appearing in the same abstract, as well as to separate abstract numbers, as e.g., in first line, column 43. The last abstract-compound number listed for any molecular formula is never followed by a (/) or (-) and the appearance of any punctuation mark at the end of the line indicates that additional abstract-compound numbers for that formula will follow in the next line, column, or page.

An asterisk (*) instead of a compound number indicates that the compound is not a new compound but the end-product of a new reaction or a new synthesis.

All compound numbers appear as arabic numbers in the index. Only in articles where the author uses both roman and arabic numbers for diagram designation will the roman number be translated with the prefix *R*. In such a case, *VA* will read *R5A*. In some cases, where roman numerals are the majority, an *A* may prefix the arabic number, e.g., *5A* will read *A5A*.
